

Please implement a simple *FLASHLIGHT* Android application. The UI should look - *at least* - like the following screen-shots

**HINT:** Use nested Linear Layouts (as discussed in class) to produce the UI for this assignment.

Test your application in the Emulator.

Document your code (this will impact your grade).

Print the XML LAYOUT and CODE. Include SCREENSHOTS showing your application working (use the DDMS screen capture tool).

*Extra points for improved design and features !*
